Compiled by the Custodian of the Rothschild Collection of
Siphonaptera, Department of Entomology, British Museum
(Natural History), South Kensington, London SW7 5BD

[illegible]

Please find herewith:

- lists of additional literature for 1976 (list 6) and 1977 (list 3)
- a bibliography of faunistic key-works, catalogues and lists

NOTES AND OBSERVATIONS

Smitt & Wright, in their "Notes on the Wagner collection of Siphonaptera in the Zoologisches Museum, Hamburg" (1965, Mitt. hamb. zool. Mus. Inst. 62: 1-54) remark (p. 4) that "During the war years [2nd world war] Wagner wrote a new classification of the fleas of the world. It must have been a tremendous tragedy for the old man that he had to leave his large and important manuscript, as well as his entire library, behind in Beograd in the great hurry to get away [in the autumn of 1944]." We were unable to find out how fate had dealt with the manuscript but now I understand that it will be the MS in the Zoological Institute, Leningrad, as referred to by Vysotskaya & Kir'yakova in their 1970 "Metody sbora i izucheniya blokh i ikh lichinok" [Methods of collecting and studying fleas and their larvae]. These authors provide the following interesting information (p. 14): "Julius Wagner prepared a manuscript for "The fauna of the U.S.S.R. and adjacent countries. Fleas (Suctoria)" of 775 pages, beautifully illustrated with more than 400 drawings. Unfortunately, this manuscript, which deals with about 40 genera and more than 200 species of fleas, was kept for about 20 [?] years in the Parasitological Laboratory of the Stavropol' Antiplague Research Institute and not published. It was eventually returned to the Zoological Institute, Leningrad, in 1956. The Yu. N. Wagner manuscript was of enormous importance for information about systematics and faunistics of fleas and during those years it served as the basis for the compilation of keys for the fleas of our country."

In the 1977 Anonymous report on the Flea Conference (Antenna 1: 51) the statement is made that N. C. Rothschild described 500 species of fleas. For the sake of accuracy, the exact figures are:

described by N. C. Rothschild	: 222 spp./sspp. (25 synonyms)
described by K. Jordan & N. C. Rothschild	: 207 spp./sspp. (19 synonyms)
described by K. Jordan	: <u>296</u> spp./sspp. (<u>37</u> synonyms)
described between the two of them	<u>725</u> spp./sspp. (<u>81</u> synonyms)
i. e.	644 current names

The enclosed "Bibliography of faunistic key-works, catalogues and lists" is not claimed to be exhaustive although I hope that I have not overlooked many important major references. On the whole the most recent (not necessarily always recent) relevant titles are included; local lists for relatively small areas are mostly excluded.

Definition of a flea according to Jules Renard (1918, Histoires Naturelles. Paris): "Un grain de tabac à ressort." [by courtesy of Maria Suciu].

"Je mehr man lernt, desto vorsichtiger wird man."

Karl Heinrich Heine
1971 "Glück und Glas"

MAILING LIST - Additions:

- Dr J. E. M. H. van Bronswijk - Academisch Ziekenhuis (Dermatologie/Minibiologie),
Catharijnesingel 101, Utrecht, NETHERLANDS

FLEAS IN 'FINE' ART - Dr Maria Suciú kindly supplied me with the following
additions (the the list in Flea News 11) which she found in F. Hazan, 1964,
Dictionnaire de la peinture italienne:

Johann Tscherning [Tscherning, Tscherninck] (died 1634; a son of same name died
1685; Strassbourg) - "Women de-fleaing themselves" (engraving)

Bernard Picart (1673-1733; Amsterdam) - "A woman de-fleaing herself at a candle"
(engraving)

Guiseppe Maria Crespi ("Lo Spagnuolo", 1665-1747; Bologna) - "La chercheuse de puces"

Moreover, In Schimitschek's 1977 book (see 1977 - list 3) are pictures of:

Gerard van Honthorst (1590-1656) - "Flohjagd im Kerzenschein" (Oeffentliche Kunst-
sammlung, Basel) [different from the previously listed "Chasse aux puces"]

A. K. Luplau (Fürstenberg) - a porcelain figure (1773) "Die Flohsucherin"

* * *

Miss Bernice Williams, who is making a study of the cat-flea, kindly granted
permission to quote here a parody à la W. Shakespeare written by her friend
Frances Whistler (daughter of the illustrious poet / glass engraver Laurence
Whistler, C.B.E.) after an experiment involving cat-fleas in a so-called con-
stant temperature oven. - [F.S. more than fully shares Miss Whistler's sentiments !]

E P I T A P H

FOR A FLEA

WHO WITH NINE AND TWENTY OTHERS

WAS MOST CRUELLY BURNT ALIVE

- A.D. MCMLXXVII -

Feare no more the heat o' th' incubator,
Nor th' thermometer's steady rise;
Ctenocephalides' immolator
Caused has thy swift demise.
Siphonaptera all must
Leap their last, and come to dust.

Feare no more the tests of the Great,
Thou art past all stimulus.
Care no more to jump and mate,
No blood-meal gives thee impetus.
Yet comfort thee! Fleaologists must
Eventually too come to dust!
