-O-

Please find herewith:

- a bibliography of publications on fleas by F. Peus
- lists of additional literature for 1977 (list 5) and 1978 (list 3)
as well as the first list for 1979

* * *

Prof. Dr Fritz PEUS (22.IV.1904 - 17.XI.1978) -

It is with the deepest regret that the death is recorded of a highly esteemed colleague and friend, Professor Dr Fritz Peus.

I would like to recall, with gratitude, that his 1938 book "Die Flöhe", which I had read during the war years, was one of the stimulants which aroused my own interest in these insects. I was therefore much pleased and excited when, in 1947, at Dr Karl Jordan's suggestion, Professor Peus wrote to inform me of his continuing interest in the study of fleas. Soon a steady correspondence developed between us and this continued to shortly before his death. During that long period I had thrice the privilege of visiting him and his family in Berlin; their cordial and generous hospitality made those occasions very memorable.

Professor Peus was first and foremost a nature lover and specialized in many diverse groups: apart from fleas, Diptera were much collected and studied by him (Culicidae, Chaoboridae, Dixidae, Tanyderidae, Liriopeidae, Cylindrotominae, Asilidae, Stomoxyinae, Calliphoridae and Tabanidae); he was a keen ornithologist, had a profound knowledge of European mammals and was also concerned with matters of ecology and nature protection. In spite of numerous adversities in his life (during the last decennium especially as regards his fragile health), this courageous and energetic man worked very productively and - perhaps because fleas were his most favourite subject - Prof. Peus fortunately managed to finish and publish all he had intended to write concerning these insects. What satisfaction to have completed a certain extensive task in time! The enclosed bibliography shows a good deal of variation in subject matter as well as a special interest in the Mediterranean fauna. Moreover, Professor Peus also greatly elucidated the flea fauna of his own country, which had long been neglected. It is fitting that his final flea publication deals with subspecies of *Ctenophthalmus agyrtes*, a subject which was close to his heart.

We extend our sympathy to Frau Monika Peus, their daughter and two sons. Together they formed a happy and harmonious family, creating a blissful atmosphere highly conducive for Fritz to "play with his beloved fleas" to his heart's delight.

For biographical details see: 1976, Mitt. Dtsch. ent. Ges. 34: 65-72;
1976, Ent. germ. 2: 388-393.

The Peus collection of fleas and flea literature was obtained, early in 1978, by the Muséum d'Histoire Naturelle de Genève; any inquiries to be addressed to Dr B. Hauser, Département des Arthropodes. A copy of the list of taxa represented in the Peus collection is kept in the Flea Room BMNH.

F. S.

A REQUEST - I am preparing Vol. VII of the Catalogue of the Rothschild Collection of Fleas, dealing with Malacopsylloidea. The first draft of Malacopsyllidae and Rhopalopsyllidae, subfamily Parapsyllinae, has been written and I would now like to invite colleagues either to send me any (awkward) well-mounted specimens for determination (but no large quantities, please) or to donate material to our collection for listing in the catalogue. The following genera are involved: Malacopsylla, Phthiropsylla, Tetrapsyllus, Delostichus, Ectinorus (including Dysmicus), Panallius, Eritranis, Listronius and Parapsyllus.

F. G. A. M. Smit
