GLEN M. KOHLS

23-X-1905

3-VIII-1986

We have recently been informed by Dr. William L. Jellison that Dr. Glen M. Kohls died of natural causes at his home in Hamilton, Montana, on Sunday, August 3rd.

Dr. Kohls was born in Vesta, Minnesota. He received the B.S. degree in entomology from Montana State University in 1929 and the M.S. degree from the University of Minnesota in 1937. He began his career at the Rocky Mountain Laboratory, Hamilton, Montana, in 1927 under Dr. R. A. Cooley. His primary assignment was to work with ticks and the diseases they transmit, including Rocky Mountain Spotted Fever. During World War II he was commissioned a captain in the Medical Service Corps to serve on the Scrub Typhus Commission. He also taught at the Army Medical School, Walter Reed, in Washington, D.C.

and served in the Burma Theatre of operations. He was discharged a lieutenant colonel and returned to his work at Rocky Mountain Laboratory at the end of his military service.

Dr. Kohls received an honorary doctorate degree from Montana State University in 1966 and was awarded the Meritorious Service Medal by the United States Public Health Service in 1968. During his career he was author or coauthor of 183 scientific papers and 12 animal taxa bear his name, including a subgenus and 3 species of ticks, 3 species of mites, 1 each of a spider, cockroach and streblid, and the flea genus Kohlsia Traub, 1950, and the flea species Corypsylla kohlsi Hubbard, 1940.

Listed below are the titles dealing with fleas authored or coauthored by Dr. Kohls.

* ~~Advised From Mrs. Strong 31 Dec 86~~

NEWLY PUBLISHED - The following information concerning the publication of a volume dealing with the fleas of the People's Republic of China was provided by Professor LIU Chi-ying for inclusion in this issue of Flea News.

SIPHONAPTERA, Series Insecta, Fauna Sinica. C.-y. Liu, K.-c. Li et al., 1986 (December). Science Press, 137 Chaoyangmennei Street, Beijing, The People's Republic of China. 16 mo., 1340 pp., 1948 figs. US \$45.00 including surface postage.

This monograph was undertaken under the auspices of the Fauna Editorial Committee, Academia Sinica, during the years 1973-1982. It is divided into several parts, of which Part One is a general account of the Siphonaptera. It concerns itself with the distribution of Chinese fleas and their hosts, dividing the area into 2 regions, 3 subregions, 7 districts and 19 subdistricts.

Part Two contains a systematic account of the 8 families, 71 genera and 452 species and subspecies occurring in the area under consideration. This makes up the largest part of the book and includes keys to the various taxa and illustrations for each.

Part Three is the English text and contains a brief resumé of the book, including summaries of the descriptions of 17 new species and subspecies. Corresponding Chinese descriptions are found in Part Two. All illustrations are numbered and bear Latin captions. The book concludes with a table of the geographical distribution of the Chinese flea species, a Host/Parasite index, and Literature Cited.

* * *

subspecies of Ectinorhynchus
NOMEN NUDUM - Through the kind offices of Professor J. C. BEAUCOURNU, a nomen nudum has been called to our attention. In appendix I, page 80, of Rood, J. P., 1972, "Ecological and behavioural comparisons of three genera of Argentine caviés" (Anim. Behav. Monogr. 5(1): 1-83), the author cites a list of ectoparasites collected on members of the Caviinae. Tiamastus cavicola and Panallius atropus are reported from Cavia aperea. To my knowledge the specific epithet atropus has never been associated with the genus Panallius or with any other flea genus for that matter. In his acknowledgements Rood indicates that the ectoparasites were identified by the late Dr. E. Del Ponte. Whether the species was new and Del Ponte intended to describe it is a moot question since a description was never published. Therefore the name atropus should be added to the list of nomina nuda. ---R.E.L.

* * *

CONGRATULATIONS - Douglas P. Schelhaas received his Doctor of Philosophy degree from the University of North Dakota on 1 August 1986. The title of his dissertation is "Antifreeze production and cold-tolerance in overwintering purple martin fleas, Ceratophyllus idius Jordan and Rothschild." Dr. Schelhaas is now teaching in the Biology Department, U.S. Air Force Academy, Colorado Springs, Colorado.

* * *

PERSONALIA - Dr. John Lane has written to inform us of the retirement of Dr. Brian R. LAURENCE from the London School of Hygiene and Tropical Medicine. Dr. Laurence is a long-time recipient of Flea News and we send him our best wishes for a happy retirement. Dr. Lane will continue to receive Flea News for the Department of Entomology.

* * *

NOTES

When the volume Insects of Southern Africa was reviewed on p. 209 of Flea News 32, we had no price available. We have since learned that the price for this book is US \$134.95.

HOOGSTRAAL CENTER - Harry Hoogstraal willed his library and his unparalleled tick collection to the Smithsonian Institution to form the nucleus of an international center for tick research. The Smithsonian has established the Harry Hoogstraal Center for Tick Research and the Harry Hoogstraal Fund, and would welcome contributions in his name. For further information, contact the Office of Membership and Development, Smithsonian Institution, Washington, D.C. 20560 or call (202) 357-3355.

According to the October/November issue of the U.S. Armed Forces Pest Management Board Technical Information Bulletin, plague has been reported from Madagascar, Uganda and Bolivia during 1986. A single case was also diagnosed in Siskiyou County, California.

* * *

CONFERENCES

The 38th annual meeting of the ANNUAL MIDWESTERN CONFERENCE OF PARASITOLOGISTS took place at the University of Missouri, Columbia, Missouri, 5-7 June 1986. Among the presentations was one on fleas:

"Glycogen and glycerol in the cryoprotection of purple martin fleas, Ceratophyllus idius." - D. P. Schelhaas and O. Larson, Biology Department, University of North Dakota.

The SOCIETY OF VECTOR ECOLOGISTS held their 18th annual conference 19-21 November 1986 at the University of California, Riverside. The conference consisted of six colloquia of invited papers. Pertinent topics and their presentors were

Colloquium II - Ectoparasite-borne Zoonoses

"Plague ecology" - Bernard C. Nelson

"Laboratory trials of a new insecticide for the control of plague vectors" - Gary O. Maupin

Colloquium V - Vector Competency

"Ectoparasites of native and commensal rodents in Sulawesi, Indonesia" - Lance A. Durden

Colloquium VI - Coevolution of ectoparasites and vertebrate hosts

"Coevolution of fleas and hosts" - Robert E. Lewis

"Coevolution of beetles and rodents" - Robert Timm [postulated that amblyopine staphylinid beetles are predators of ectoparasites, including fleas]

The program of the ENTOMOLOGICAL SOCIETY OF AMERICA lists the following papers on fleas scheduled for presentation at their national conference 7-11 December 1986 at Reno, Nevada:

"Comparative anatomy of the male genitalia in the Pulicidae (Siphonaptera) with comments on higher classification" - T. Cheetham

"Evaluation of synthetic pyrethroids for control of cat flea, *Ctenocephalides felis* (Bourche[sic]) adults" - L. A. Lemke, P. G. Koehler, R. S. Patterson & D. Moore

"Pet owner survey of attitudes towards domiciliary cat flea infestations" - D. W. Byron & W. H. Robinson

"Small mammal community structure and ectoparasite exchange in the brejos of central Brazil" - D. D. Gettinger & K. A. Ernest
